TEBIBU SOLOMON

Junior Full-Stack Developer

Addis Ababa, Ethiopia | tebibu211@gmail.com | +251 966 807 035
tebibu-portfolio.vercel.app | linkedin.com/in/tebibusolomon | github.com/tebibu21

PROFESSIONAL SUMMARY

Motivated and detail-oriented Intermediate Full-Stack Developer and third-year Information Technology student at Addis Ababa University with hands-on experience designing and delivering modern web applications. Proficient across the full development stack — from building responsive, component-driven frontends with React and Next.js, to architecting RESTful backend services with Node.js and Express.js, and designing scalable databases with MongoDB and MySQL. Experienced in integrating third-party APIs, implementing authentication flows, and deploying cloud-hosted solutions. Strong foundation in software engineering principles including OOP, MVC architecture, and data structures. Passionate about writing clean, maintainable code and continuously learning emerging technologies to deliver impactful digital solutions. Familiar with cloud deployment, TypeScript, and modern API integration. Committed to writing clean, maintainable code and continuously advancing skills in mobile and cloud technologies.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), Python, Java, C++, C#, TypeScript (basic)
Frontend	React.js, Next.js, Tailwind CSS, HTML5, CSS3, Redux, Responsive Design
Backend	Node.js, Express.js, PHP, REST API Design, JWT Authentication, Middleware
Databases	MongoDB, MySQL, Mongoose ODM, Basic SQL & NoSQL Design
Cloud & DevOps	Vercel, Netlify, GitHub Actions (CI/CD basics), exposure to GCP, Docker concepts
Tools & Platforms	Git, GitHub, VS Code, Postman, npm, Figma (basic), Stripe API, TMDB API
Concepts & Methods	OOP, MVC Architecture, Data Structures & Algorithms, Event-Driven Programming, Agile basics, Clean Code

PROJECTS

Netflix Clone

Built a feature-rich, Netflix-inspired streaming platform UI using React.js with functional components and React Hooks. Integrated the TMDB RESTful API to dynamically fetch and display movies and TV shows by genre and popularity. Implemented responsive design with CSS/Tailwind CSS and structured reusable component architecture for scalability.

GitHub: https://github.com/tebibu21/netflix-clone

Amazon Clone — Full-Stack E-Commerce Platform

Developed a complete full-stack e-commerce solution mimicking Amazon's core functionality. Features include product catalogue browsing, dynamic shopping cart management, user authentication (Firebase), and end-to-end payment processing via Stripe. Backend built with Node.js and Express.js serving a REST API; frontend in React.js. Demonstrates proficiency in real-world payment integrations and user session handling.

GitHub: https://github.com/tebibu21/Amazon-Clone

Abebe Garage — Garage Management System

Built a full-stack garage and auto-service management web application designed to streamline operations for automotive service businesses. Features include vehicle registration and tracking, service job management, customer records, appointment scheduling, and invoice/billing functionality. The system provides a clean admin dashboard for

managing day-to-day garage operations efficiently. Demonstrates ability to model complex business domains and deliver production-ready management systems.

GitHub: https://github.com/tebibu21/Abebe-Garage

Question Forum — Decoupled Discussion Platform

Designed and implemented a full-stack question-and-answer community platform with a clean decoupled architecture. The backend exposes RESTful API endpoints for post creation, retrieval, and threaded responses, connected to a relational/document database. The React.js frontend consumes the API with dynamic state management. Demonstrates understanding of frontend-backend separation, API design, and database integration.

EXPERIENCE

Web Development Intern | *Toastmasters International — East Africa District* | 2023 – 2024

- Designed and developed a dedicated meeting management website for the Toastmasters East Africa District, serving members and clubs across the region.
- Built the full-stack web application from requirements gathering through deployment, delivering a functional platform used for scheduling, managing, and communicating about district meetings.
- Collaborated with district officers to understand organisational workflows and translate them into usable web features including event listings, member communication, and meeting records.
- Gained professional experience working within a real client relationship — handling feedback cycles, iterating on features, and meeting delivery milestones.
- Technologies used: React.js, Node.js, Express.js, MongoDB, REST APIs.

Volunteer Software Developer | *Summer Volunteer Program* | 2023

- Collaborated with a team to develop and deliver software solutions in a volunteer technical capacity.
- Applied academic knowledge of algorithms, OOP, and web technologies to practical, real-world scenarios.
- Assisted in debugging, testing, and documentation of software modules under a professional environment.
- Gained exposure to team-based workflows, version control practices, and deadline-driven development cycles.

Web Development Intern | *Commercial Bank of Ethiopia* | February 2026 – May 2026

- Completed a 3-month internship at one of Ethiopia's largest financial institutions, gaining exposure to enterprise-scale software systems and banking technology infrastructure.
- Assisted in developing and maintaining internal web-based tools and interfaces, applying full-stack skills in a real-world banking environment.
- Collaborated with senior developers and IT staff, adhering to professional workflows, security-conscious coding practices, and internal documentation standards.
- Gained practical understanding of how large organizations manage data, transactions, and digital services at scale.

Yeka Mesob Center Reporting System — Role-Based Government Reporting Platform |

- Designed and built a full-stack, role-based reporting system for a multi-institution government service center, replacing a manual shared-spreadsheet workflow. Implemented four distinct access roles (institution staff, approver, manager, admin) enforced end-to-end with JWT authentication and backend RBAC middleware, including an ownership guard that scopes each institution's staff strictly to their own data. Modeled a daily-entry approval workflow (draft → submit → approve/reject → resubmit) with MongoDB/Mongoose, and built live aggregation-based analytics (no duplicated rollup data) for management-level reporting and CSV export. Delivered as a two-tier app: React (Vite) frontend with role-guarded routing, and a Node.js/Express REST API.
- Key contributions: schema and index design (including compound uniqueness constraints to prevent duplicate daily entries), auth/RBAC middleware architecture, and a phased build plan (data layer → workflow → analytics → frontend → admin tooling) to keep a multi-role system shippable in incremental, testable stages.
- Stack: React (Vite), React Router, Recharts, Node.js, Express.js, MongoDB, Mongoose, JWT, bcrypt.

EDUCATION

Bachelor of Science in Information Science | *Addis Ababa University* | 2023-2027

- Currently in Fourth Year | GPA: In Progress
- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Software Engineering, Computer Networks, Operating Systems
- Active member of the university's IT and programming community; involved in peer learning and collaborative projects.

CERTIFICATIONS & CONTINUOUS LEARNING

- Self-directed learning in full-stack web development via platforms including freeCodeCamp, Udemy, and The Odin Project.
- Solved 100+ problems on LeetCode spanning arrays, linked lists, trees, graphs, dynamic programming, sorting, and searching — demonstrating strong command of data structures and algorithmic thinking.
- Strong foundation in Data Structures & Algorithms: proficient in arrays, stacks, queues, hash maps, binary trees, graphs, recursion, and common algorithm patterns (sliding window, two-pointer, BFS/DFS).
- Regularly contributes to personal projects and open-source repositories on GitHub.

CORE COMPETENCIES

- *Problem-Solving & Analytical Thinking*
- *Self-Driven Learning*
- *Team Collaboration*
- *Attention to Detail*
- *Adaptability*
- *Time Management*
- *Communication*
- *Continuous Improvement Mindset*
